REVERSE (ReverseClimateChange.com) has a goal of reversing Climate Change by utilizing the power of Web3 and its community. By rewarding people for doing good we will grow our impact to a scale that cannot be matched by individuals, institutions, or governments. In fact, we have already started to make an impact:

At the core of REVERSE is our token RVRS. By transacting with our token, buying, selling, sending, our community incurs a 20% fee that is split evenly between doing good - 10% goes to reversing climate change, and doing well - 5% are burned and 5% distributed to current holders effectively delivering yield for holding RVRS.

Our Financial Performance

REVERSE was founded on August 15, 2021, via a fair launch - 100% of \$RVRS tokens were added to AMM Liquidity Pools on the Polygon Network. No funds were raised, no tokens were sold. 1 billion RVRS were matched with the founder's \$350,000 donation, setting the REVERSE market cap at \$350,000. No more tokens can be minted, and all liquidity pools are locked.

Since then we have grown quickly

- We added over 6,000 Twitter followers
- We added over 1,000 Telegram users
- RVRS token appreciated over 500%
- RRVRS wallet count grew to over 600
- Removed burned over 7% from circulating and total supply
- Established a dynamic website, rewarding users with data on the climate impact they had by using REVERSE

Our ESG Performance

Early on in our journey, we partnered with Ecologi.com to quickly deliver impact, it can be seen here: https://ecologi.com/reverse. Now we are looking to Web3 native solutions such as Toucan Protocol to further automate our Carbon Removal activity. In addition to directly paying for credits or offsets or removals, we are also investing in projects that should deliver a much higher rate of return.

REVERSE for Individuals:

On average a person causes 5 to 15 tonnes of CO2 emissions per year. For obvious reasons people in developing countries are closer to 5 tonnes and countries like the United States closer to 15 tonnes. Of course, if you own multiple cars, homes, or fly private, your emissions are higher, and you should consider the plan below.

Removing or offsetting 10 tonnes of CO2 only requires a purchase of \$600 worth of RVRS. With that purchase, you remove 10 tonnes of CO2, contribute \$60 to growing the value of RVRS and receive \$480 RVRS. As others buy or sell RVRS, they also contribute to its holders, so everyone's RVRS balance always increases, and its total supply always shrinks!

Additionally, a single round trip in coach emits 1 tonne of CO2, consider buying \$100 of RVRS each time you fly, and perhaps the following flight will be on us.

Get started by purchasing RVRS on <u>Dfyn</u>, and feel good about reversing climate change and earning yield while you do it. Once you do, you will be able to see your CO2 impact <u>here</u>:

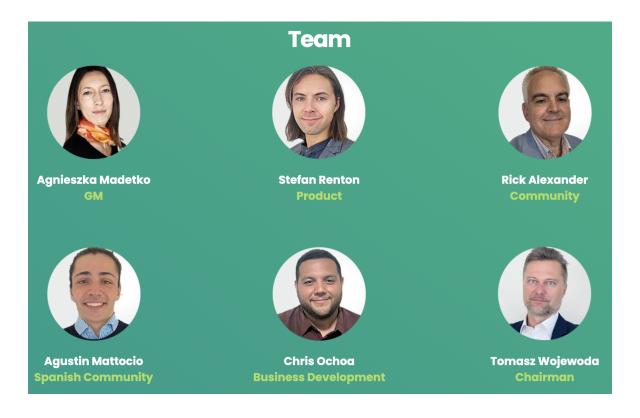

REVERSE for Wealthy Individuals and Businesses:

We have created a simple online tool to help you estimate your annual CO2 emissions and a Concierge Team that will take you through the steps necessary to secure the appropriate amount of RVRS. Once you enter your data, our concierge team will contact you, review the results and tailor a bespoke zero-carbon program for you.

Don't expense your zero-carbon initiatives, turn them into real financial assets that deliver yield for years to come! Get started by filling out this form, and feel good about reversing climate change and earning yield while you do it.

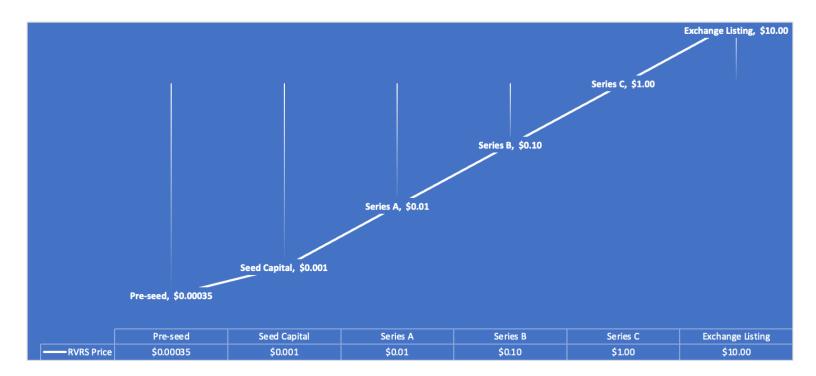

Who are we?

REVERS was founded and funded by an experienced team that is also responsible for AGA token:

"Funding rounds"

While RVRS is a Fair Launch project available on decentralized exchanges, we envision 5 "funding" rounds before listing RVRS on a major exchange. Pre-seed and Seed have already been completed, and our early patrons already contributed over \$1,000,000 to fighting climate change.

Currently, we are raising up to \$9,000,000 in Series A, which will be followed by Series B and C. Each stage concludes when we reach a target price of \$0.01 in Series A, \$0.10 in Series B, and \$1.00 in Series C.

| RVRS | Pre-seed | | Seed | l Capital | Seri | ies A | Ser | ies B | Ser | ies C | Exchange Listing |
|-----------------------------|----------|---------|------|-----------|------|-------------|-----|-------------|-----|---------------|------------------|
| Target Price | \$ | 0.00035 | \$ | 0.001 | \$ | 0.01 | \$ | 0.10 | \$ | 1.00 | TBD |
| TOTAL Investment CAP | \$ | 350,000 | \$ | 650,000 | \$ | 9,000,000 | \$ | 90,000,000 | \$ | 900,000,000 | Unlimited |
| MCAP Range | \$ | 350,000 | \$ | 1,000,000 | \$ | 10,000,000 | \$ | 100,000,000 | \$ | 1,000,000,000 | Unlimited |
| Timing | | 8/15/21 | | 10/15/21 | | We are here | | 2022 | | TBD | TBD |

Tokenomics

We minted 1 Billion REVERSE tokens on the Polygon Blockchain, and no more RVRS can be minted. We then added **all** of the minted RVRS into QuickSwap and Dfyn DEX liquidity pools against \$350,000 worth of USDC, MATIC, AGA and AGAr, setting the price at \$0.00035. That liquidity is locked and not available for withdrawals.

token is deflationary, in fact already 7.4% was burned, resulting in 926 million RVRS remaining. This creates a positive pressure on price.

REVERSE team does not hold any tokens, and there is only one, decentralized way in which anyone can acquire RVRS tokens - QuickSwap and Dfyn decentralized exchanges on the Polygon Blockchain - this sets a level playing field for all the participants.

Since every REVERSE transaction burns 5% - RVRS

| Overview ERC-20 | | | | | | |
|--|---|--|--|--|--|--|
| PRICE \$0.00 @ 0.000613 MATIC (+24.49%) | FULLY DILUTED MARKET CAP ③ \$1,019,647.30 | | | | | |
| Total Supply: | 926,068,118.374385 RVRS ① | | | | | |
| Holders: | 611 addresses | | | | | |
| Transfers: | 59,119 | | | | | |
